## **FURTHER POSITIVE GOLD GRADES AT BATOURI PROJECT IN CAMEROON**

**Toronto, (22<sup>nd</sup> July, 2009) - African Aura Resources Ltd. (“African Aura” or the “Company”, TSX-V: AAZ)**, an exploration company with gold, iron ore and uranium exploration activities in sub-Saharan Africa, announces that it has received further positive gold results from follow up drilling at Kambele within the Company’s 100% owned Batouri gold project in eastern Cameroon.

- **Drill intersections from an additional 12 holes received to date include:**
  - **4.99 g/t Au over 9m**
  - **5.52g/t Au over 5m**
  - **34.67g/t Au over 1m**
  - **37.42g/t Au over 1m**
- **Confirms presence of multiple shallow dipping gold-in-quartz zones**
- **Results from an additional 9 holes expected shortly**
- **Data compilation underway for maiden resource estimate**

### **John Gray, Chief Executive Officer, commented:**

“These results provide further confirmation of the presence of significant shallow dipping gold mineralised structures currently defined along 500m of strike length, down 700m of dip and remaining open at depth. The surface trace of this structure is presently the focus of intense artisanal gold mining, with over 100 pits up to 20m deep over an area of 600m by 600m. We look forward to receiving further results during August and updating shareholders once these have been received and interpreted. Thereafter we will engage an independent consultant to undertake a maiden resource estimate.”

### **Kambele Gold Prospect**

The Company has received further assay results from an additional 12 drill holes from the recently concluded second phase of drilling at the Kambele gold prospect, located within the Company’s 100% owned Batouri Gold Project in eastern Cameroon. This phase of drilling comprised 25 holes and was undertaken using the Company’s two in-house operated drill rigs.

The programme is designed to define an initial resource estimate on the Kambele prospect and comprises five fences on a 100m step-out grid to a maximum drilled depth of 140m across an area which has been intensively worked by hard rock artisanal gold miners.

Drilling to date at the Kambele prospect indicates the presence of two or more, sub-horizontal, sub-parallel gold mineralised zones up to 10m thick containing quartz veins and stringers, dipping 15 degrees towards north. The potential aerial extent of this target is at least 500m by 700m and remains open down dip to the north. Company geologists have recorded visible gold in 25 out of 44 holes drilled to date at Kambele where the gold is associated with a specific generation of quartz veins and stringers that can be reliably targeted in future drilling programmes (Table 1 below, news release dated July 6<sup>th</sup>, 2009 & updated maps and sections at [www.african-aura.com](http://www.african-aura.com)).

Table 1 Assay results from the Phase-2 drill programme at Kambele

Hole ID	From	To	Intersection (m)	Gold (g/t)
<b>KBDD27A</b>				NSR
<b>KBDD071</b>	30.5	41.0	<b>10.5</b>	<b>1.04</b>

## Oversight

*The exploration results and further planned work in Cameroon have been reviewed and approved by Mark Biddulph. He holds a BSc Hons in Geology, and GIS from Rhodes University, and a GDE in Mining Engineering (Mineral Economics) from the University of Witwatersrand in South Africa. Mr Biddulph is a Professional Natural Scientist under the South African Council for Natural Scientific Professions (SACNASP) and a Qualified Person under National Instrument 43-101.*

## Quality Control and Sample Preparation

*African Aura has a rigorous Quality Control Program (QCP) inserting a minimum 5% standards, blanks and duplicates into the sample stream. The Company employs independently owned and managed OMAC Laboratories for all its assay requirements, including the preparation of pulps to 90% -100micron at their in-country preparation facilities in Cameroon and Liberia, followed by 50gram fire assay (with lower detection limit of 2ppb Au) at their main laboratory in Loughrea, Ireland. OMAC is accredited to ISO 17025 by INAB (Irish National Accreditation Board) which is a member of ILAC (International Laboratory Accreditation Cooperation), and is a signatory to the ILAC Mutual Recognition Arrangement. OMAC operates an internal QA/QC check assay programme using in-house standards, reagent blanks and duplicates.*

## About African Aura

*African Aura (TSX-V: AAZ) has a 'first-mover' exploration strategy, focused on the discovery of economic iron, gold, and uranium deposits in sub-Saharan Africa. African Aura commenced exploration in 2004 and has established a portfolio of exploration licences totalling approximately 9,880km<sup>2</sup>, targeting areas of active artisanal gold mining within Archaean greenstone and Proterozoic volcano-sedimentary belts. The portfolio includes the 12km long Nkout iron project in southern Cameroon, the Batouri gold project in eastern Cameroon, the Fula Camp gold project in western Liberia, and a pipeline of significant prospects for drill testing, as well as numerous other gold, uranium and iron ore targets that require follow up exploration. African Aura trades on the TSX-V under the symbol AAZ.*

## Forward-looking Statements

*This press release includes certain Forward-Looking Statements. All statements, other than statements of historical fact, included herein, including without limitation, statements regarding potential mineralisation and reserves, exploration results and future plans and objectives of African Aura, are forward-looking statements that involve various known and unknown risks and uncertainties as well as other factors. There can be no assurance that such statements will prove to be accurate and actual results and future events could differ materially from those anticipated in such statements. The Company has no obligation to update or modify such forward-looking statements, either as a result of new information, future events or for any other reason, and we expressly deny any such obligation in relation thereto. Important factors that could cause actual results to differ materially from African Aura's expectations*
